

Next-Generation Expert

Portfolio + Introduction

SOON GU JUNG

Email : vola2626@gmail.com

GitHub : <https://github.com/mxprnc>

Profile

Backend

Spring, Spring Boot, JPA, Querydsl
Java, Kotlin, Python
RabbitMQ, Kafka
Redis, Hazelcast, Memcached

Certifications

ICA (Istio Certified Associate) / CNCF
CKA (Certified Kubernetes Administrator) / CNCF
Engineer Information Processing / HRD Korea

Frontend

JavaScript, jQuery
React

Infrastructure

Istio, Kubernetes, Terraform, AWS

Backend Developer (6 years 4 months)

SOON GU JUNG

History

Project Experience

TWAVE (Random Box CMS Backend Development and Maintenance)

Waiker (Market Data Services)

DK Techin (Melon Service Operations)

NuriFlex (EMS (Energy Monitoring System))

Juni Korea (Hardware Replacement)

TWAVE

- **Operations**

Customer Support and Issue Handling

Backend Revisions and Major Service Changes

- **Project**

Random Box CMS Backend Development

Integrated BizMarket product and parcel-delivery tracking APIs.

Developed image upload and download features using Amazon S3.

Developed CMS features for order and delivery list, detail, update, and deletion.

Spring Batch

Handled stage-exit follow-up, uncredited-point cases, and withdrawn-user processing.

Developed winning-probability calculation, rebalancing, and reset logic.

Waiker

● Operations

Customer Support and Issue Handling

Backend Revisions and Major Service Changes

● Project

Waiker Securities Platform APIs

Refinitiv Real-Time Market Data Service

● Traffic

Approx. 7K events/s

Refinitiv (data vendor) → Waiker

- TCP/IP communication (standalone protocol)

Waiker(waiker-data-websocket) → App,Web

- Pushed current prices and aggregated OHLC data through WebSocket.

Waiker(price-api) → App,Web

- API for data lookup from web/application clients

Internal services

waiker-data-live

- Processed live Refinitiv data and supplied it to internal systems.

waiker-data-collector

- Reproduced and supplied real-time daily/hourly/minute/second OHLC aggregates.

Waiker — Real-Time Market Data Service

This was the most challenging project. The following work focused on solving its main technical issues.

- **Field Mapping Validation**

Listed the required fields, extracted log data, and selected the fields needed by the service.

- **Price Aggregation Improvements**

Identified errors in the legacy daily/hourly/minute/second OHLC aggregation and replaced it with revised code.

Redesigned the infrastructure and application code for real-time daily/hourly/minute/second OHLC aggregation.

- **Separation of Messaging and Transaction Layers**

Kept the messaging layer focused on message delivery and moved transactions to scheduled delayed batches to improve high-frequency I/O.

- **Refactoring and Test Cases**

Added test cases for critical functions and established a pre-deployment process to check regressions and side effects.

Separated data-access logic from aggregation logic so that core calculations could be tested independently.

DK Technin

● Operations

Melon Comments, Comment Admin, and Clean Platform

Melon corporate-account transition

Maintenance and QA for Kids, HiFi, and MyLog

Internal System Operations and migration to the new Melon Admin system (MAMS)

Maintenance and QA for Melon Kids, HiFi, and MyLog
Springframework, JSP, JSTL, jQuery, Oracle, MySQL,
MyBatis, Memcached

Melon Comments, Comment
Admin, and Clean Platform

Melon Comment Admin
Managed major promotional banners in Melon Comments.
Configured visibility and display order for major
comment-service menus.
Maintained operational tools for comment-service
administrators.

Kakao Clean Platform API
kakao

AI-based filtering API that detects abusive language in input text.
Managed a blacklist of selected members.

Internal System Operations and migration to the new
Melon Admin system (MAMS)
Kubernetes, Kotlin, Helm, Spring Boot, JPA, Querydsl

NuriFlex

● Project

SK E&S Energy Monitoring System

SUSTERA PV/ESS Monitoring System

● Operations

CJ PCC Busan Renewable Energy Innovation Center

SK E&S Energy Monitoring System

Developed backend and frontend features for equipment status and history.

Developed dashboards for EMS and TOC sites.

Developed SQL for hourly, daily, monthly, and yearly statistics.

Integrated Naver Maps and Kakao Maps APIs and developed clustering and visualization features.

SUSTERA PV/ESS Monitoring System

Developed backend and frontend features for equipment status and history.

Developed SQL for hourly, daily, monthly, and yearly statistics.

Visualized equipment metrics and time-series trends.

CJ PCC Busan Renewable Energy Innovation Center

Maintained and operated the equipment-status WebSocket frontend.

Implemented requested UI updates.

Juni Korea

- Project

Hardware Replacement

- Operations

HEMS Operations and Maintenance
(Network Element Management System)
